YESHIVA UNIVERSITY GRADUATE PROGRAM IN MATHEMATICAL SCIENCES TOPICS FOR THE PHD QUALIFYING EXAMINATION

The qualifying examination in mathematical sciences covers three areas:

- (I) Real Analysis
- (II) Complex Analysis
- (III) Research Area

For the rst two areas, a list of topics is below. Also, a list of sample exercises for the two areas is provided. The actual exercises asked on the exam will be di erent from the sample exercises; being able to solve the sample exercises is not su cient for the exam preparation.

The third exam area pertains to the research subject that the student intends

- 7. Riemann-Lebesque Theorem (outline). A function $f: [a;b] / \mathbb{R}$ is Riemann integrable if and only if it is bounded and its set of discontinuity points is of measure zero.
- 8. Sequences of functions (uniform convergence, properties, equi-continuity for a family of functions, Ascoli-Arzela's theorem).

Complex Analysis:

- 1. If f is complex di erentiable at z then the Cauchy-Riemann equations are satis ed at z.
- 2. If the partial derivatives of u and v exist and are continuous at (x; y) and the Cauchy-Riemann equations are satis ed then f(z) = u(x; y) + iv(x; y)is complex di erentiable at z = x + iy.
- 3. If $f^{\theta}(z) = 0$ in a region D then f is constant on D.
- 4. If jf(z)j < M on a curve C then ${R \choose C} f(z)dz < ML$ where L ia the length of the curve.
- 5. The following statements are equivalent:
 - (i) f has an antiderivative F;

 - (ii) $R_{z_2} = f(z) dz = F(z_2)$ $F(z_1)$; (iii) If C is a closed curve then R = C f(z) dz = 0.
- 6. Cauchy-Goursat Theorem (outline). If f is analytic on and inside a simple closed curve C then $\int_C f(z) dz = 0$.
- 7. If f is analytic in the region between closed curves \mathcal{C}_2 and \mathcal{C}_1 with \mathcal{C}_1 inside C_2 then

$$Z$$

$$f(z) dz =$$

$$C_2$$

$$f(z) dz:$$

- 8. The Cauchy Integral Formula.
- 9. A bounded entire function is constant.
- 10. If f is analytic on annulus, it equals its Laurent series (outline).
- 11. Cauchy Residue Theorem.

Sample Exercises:

1. Let

$$f(x) = \begin{cases} \sin \frac{1}{x} & \text{for } x \in 0; \\ \text{for } x = 0, \end{cases}$$

where 2[1;1].

- (a) Is f continuous?
- (b) Does f have the intermediate value property?
- 2. Let

$$f(x) = \begin{cases} x^2 \sin \frac{1}{x} ; & \text{for } x \neq 0; \\ 0; & \text{for } x = 0, \end{cases}$$

- (a) Show that f is differentiable everywhere.
- (b) Is f^{\emptyset} continuous?
- 3. Given that f is a quadratic polynomial

$$f(x) = Kx^2 +$$

- 6. On uniform convergence.

 - (b) Let ff_ng be a sequence of continuously di erentiable functions such that ff_ng and ff_n^gg converge uniformly on a domain to the limiting functions f and g, respectively. Show that for every x in the interior of f,

$$g(x)$$
 $\lim_{n! \to 1} f_n^{\emptyset}(x) = \lim_{n! \to 1} f_n(x)^{\emptyset}$ $f^{\emptyset}(x)$:

- 7. State Ascoli-Arzela's Theorem and outline its proof.
- 8. The sequence of continuous functions $ff_n:[0;2]/\mathbb{R}g_{n\geq \mathbb{N}}$ with f_n given by $f_n(x)=\sin(nx)$ is uniformly bounded, but not equicontinuous. Give an intuitive reason why such a sequence is not equicontinuous, then give a rigorous proof.
- 9. Compute the following integral limit

$$\lim_{n! \to 1} \frac{Z}{x(x^2 + 1)} dx$$

10. Consider the function

$$f(z) = \begin{cases} \frac{z^2}{z}; & \text{if } z \in 0; \\ 0; & \text{if } z = 0; \end{cases}$$

Is this function di erentiable at z = 0? Is it continuous at

Figure 1: Contour C

- 15. Show that the only conformal maps from the complex plane onto itself are the non-constant linear maps, i.e. maps of the form f(z) = az + b, $a \in 0$.
- 16. Let f be a doubly periodic function, that is, there are two complex numbers w_1 ; w_2 with $w_1 = w_2 \ge \mathbb{R}$ so that for any $z \ge \mathbb{C}$, $f(z) = f(z + w_1) = f(z + w_2)$. Let us also assume that f is meromorphic.
 - (a) Show that if f is an entire function, then it has to be constant.
 - (b) Let be the boundary of the parallelogram with vertices 0; w_1 ; w_2 ; $w_1 + w_2$, oriented counterclockwise. Show that if f is analytic on , then f(z)dz = 0.
 - (c) Assuming that f is analytic on and has exactly one singularity inside , show that the residue at this singularity is necessarily zero.
